

MICHAEL GUERRERO

San Diego, CA | +1 (619)-597 9661 | michael.guerrero0704@gmail.com | github.com/mikxvii | mikxvii.com | [LinkedIn](#)

EDUCATION

University of California, Berkeley

May 2026

B.A. Computer Science — College of Computing, Data Science and Society

GPA: 3.7/4.0

- **Relevant Coursework:** Internet Architecture & Protocols (CS168), Computer Security (CS161), Operating Systems (CS162), Computer Architecture, Data Structures, Efficient Algorithms, Discrete Math & Probability, Calculus I & II

PROJECTS

Windows Server & Active Directory

Feb. 2026

Cloud Infrastructure, Home Lab

Microsoft Azure

- Deployed **Windows Server 2025** VM on Azure and promoted to **Domain Controller**, establishing the `mike.local` domain with Organizational Units (Engineering, HR, Finance), user accounts, and security groups for identity management
- Enforced security via **Group Policy Objects**: password complexity (10-char minimum), 90-day expiration, and 10-minute inactivity screen lock; configured **RBAC** shared folder access control through department-based security groups
- Simulated real IT operations: user onboarding/offboarding, account disable/re-enable, password resets with forced change at next logon, security group membership management, and documented all configurations and procedures on GitHub

Linux Server Administration

Mar. 2026

Systems Administration, Home Lab

Microsoft Azure

- Deployed **Ubuntu Server 24.04 LTS** on Azure via SSH key-based authentication; administered users, groups, and file permissions (`chmod`, `chgrp`, `chmod 770`) with department-based access isolation verified through cross-group testing
- Managed system **services and processes** via `systemctl` (start, stop, restart, enable, disable), installed and updated software packages using `apt`, and maintained system hygiene through regular security patching practices
- Analyzed system and authentication logs using `journalctl` with service-level (`-u`) and time-based (`--since`) filtering, reviewed `/var/log/auth.log` to audit sudo usage, login attempts, and password changes across all user accounts
- Wrote **bash scripts** for automated user onboarding (temp passwords, forced expiration), scheduled backups with retention

Traceroute Tool & Distance-Vector Routing Protocol

Spring 2026

CS 168: Internet Architecture and Protocols

UC Berkeley

- Built a **traceroute tool** in Python manipulating TTL values on UDP packets and parsing raw IPv4/ICMP/UDP headers at the byte level to discover and map real-world multi-hop network paths; validated against live traffic to `cmu.edu`
- Implemented a **distance-vector routing protocol** (RIP variant) with Bellman-Ford algorithm, split horizon, poison reverse, and triggered updates ensuring fast convergence after link failures and network topology changes

EXPERIENCE

College of Computing, Data Science, and Society — Dean's Office

Aug. 2024 – May 2026

Faculty/Staff Office Assistant

Berkeley, CA

- Resolved office AV & desktop issues for Dean's Office staff, reducing escalations to the university's system administrator
- Coordinated logistics for college-wide events (500+ attendees) including venue booking, catering, and day-of execution; received **UC Berkeley SPOT Award** from Dean Jennifer Chayes for outstanding performance and professionalism
- Created a 150+ entry Event Space Guide and managed inventory tracking using Google Sheets across CDSS departments

Circuit

Jun. 2025 – May 2026

Project Manager

Berkeley, CA

- Deployed Circuit MVP to production using **Vercel** with **CI/CD pipelines** and monitoring systems, managing **Firestore** for secure credential storage and ensuring continuous platform stability for 50+ early adopters
- Built admin dashboards with REST API endpoints for event, user, and analytics management via **Google Analytics**
- Led team of 3 engineers via Agile methodologies, managing 60+ pull requests on GitHub and coordinating product roadmap with CEO, improving team velocity by 60% and reducing average feature delivery time by over 50%

Mobile Developers of Berkeley

Jun. 2025 – Jan. 2026

President

Berkeley, CA

- Managed club operations for 50+ members: reviewed 400+ applications, led recruitment cycles and onboarding, conducted behavioral and technical interviews, and coordinated across 5 departments and 13 partner clubs under UC Berkeley ASUC

SKILLS

Infrastructure: Windows Server 2025, Active Directory, Group Policy, DNS, DHCP, Azure, Linux (Ubuntu), Docker, Git, CI/CD

Networking: TCP/IP, ICMP, UDP, Distance-Vector Routing (RIP), Packet Analysis, Traceroute, SSH, Firewalls

Programming & Tools: Bash, Python, Java, JavaScript, TypeScript, C, SQL | Azure Portal, GitHub, Firebase, PostgreSQL

Languages: Spanish (Native), French (Professional Working Proficiency)
